

PanGuard AI

Onboarding Email Sequence — Migrator Pro

Template — v2.0 · internal draft. This is the canonical source for the 5-touch Migrator Pro onboarding email sequence. Review and refine before use — do not send as-is. Replaces the retired 90-day Pilot welcome sequence (v1.0, 2026-05-20); Migrator Pro is the current annual, sales-led engagement. PanGuard AI, Inc. · Delaware C-Corporation.

Overview

This document is the canonical source for the 5-touch Migrator Pro onboarding email sequence. All emails are sent from adam@panguard.ai (Founder, signed personally — not from `noreply@`). Reply-to is set to adam@panguard.ai for personal handling.

Replace `{{tokens}}` at send time. Each email is human-reviewable before send (no auto-send).

Migrator Pro is an **annual engagement** set on an Order Form (USD \$500,000–\$2,000,000 per year, sales-led). There is no self-serve checkout. Billing follows the schedule on the Customer's Order Form (annual or quarterly, Net-30); invoicing is handled by billing@panguard.ai. The engagement is governed by the [MSA](#), the [Refund & Termination policy](#), and the [Migrator Pro SOW](#).

The onboarding is phased — kickoff, engine deployment, first quarterly evidence pack — but the engagement is an annual Term with continuous delivery thereafter (quarterly evidence refresh, annual review). There is no fixed end-of-term exit decision inside the onboarding window.

Total emails:

- **1 — Welcome / Kickoff** — Order Form effective, Term starts
 - **2 — Onboarding check-in** — tech lead onboarded, engine deployment underway
 - **3 — First quarterly evidence pack** — first signed evidence pack + quarter-end check-in
 - **4 — Quarterly review** — findings report + scope-expansion window
 - **5 — Annual review** — renewal recommendation + decision moment
-

Email 1 — Welcome / Kickoff

From: adam@panguard.ai **To:** {{customer_email}} **Cc:** (tech lead if known) **Subject:** Welcome to Migrator Pro — {{customer_org}} · your Term starts {{effective_date}}

Hi {{customer_first_name}},

You're in. Your Migrator Pro Term is effective as of {{effective_date}}, per Order Form {{order_form_number}}. Your workspace is live: https://app.panguard.ai/w/{{workspace_slug}}.

Three logins to claim:

1. **Workspace** — magic link arriving in a separate email. Sets up your password-less auth.
2. **Slack Connect** — invitation arriving within 24h. This is our shared channel for the Term.
3. **GitHub** — if you want commit access to your maintained custom rule pack repo, send me your GitHub username.

Your onboarding timeline

Phase	What happens
Week 0	Today. Workspace live. Slack Connect invitation.
Week 1–2	Kickoff call (45 min). Framework selection. Environment access.
Week 2–4	ATR engine deployment. Rule pack drafting. Legacy detection migration begins.
Week 4–6	Rule pack finalised. SIEM webhook configured.
Week 6–12 (Q1)	Production monitoring. First signed quarterly evidence pack.
Each quarter thereafter	Quarterly evidence refresh + quarterly findings review.
Term (Month 12)	Annual review & renewal recommendation.

Your 7 deliverables (per Migrator Pro SOW Section 2):

1. ATR engine deployment in your environment
2. Maintained custom ATR rule pack for your deployment
3. Legacy detection migration — up to 15 source formats (Sigma, YARA, Snort, Splunk SPL, Elastic EQL, Falco, Semgrep, CodeQL, CVE-NVD, GHSA, OSV, KEV, garak, PyRIT, promptfoo) → ATR

4. Signed, continuously re-scanned compliance evidence, refreshed quarterly (framework: {{framework}}
— one of EU AI Act / NIST AI RMF / ISO 42001 / OWASP Agentic / OWASP LLM)
5. SIEM webhook integration
6. Senior engineering support over the Term (tracker visible in your workspace)
7. Annual review & renewal recommendation

Your homework this week

1. Pick your regulatory framework (one of: EU AI Act / NIST AI RMF / ISO 42001 / OWASP Agentic / OWASP LLM). Reply with your pick.
2. Name your technical lead (the person I'll work with day-to-day). Cc them on your reply.
3. Confirm target deployment environment (VPC region / on-prem details / airgap if applicable).

Things you can already do today, before the kickoff:

- Read the published whitepaper: <https://panguard.ai/legal/security>
- Open the sample evidence pack: <https://panguard.ai/evidence-pack> (this is the format you'll get)
- Try the Community CLI: `npx @panguard-ai/panguard-scan@latest scan ~/.claude/skills` (works locally, zero setup)

Billing follows the schedule on your Order Form (annual or quarterly, Net-30); billing@panguard.ai handles invoicing. Anything on contract or terms, legal@panguard.ai and I are here.

If anything is unclear, reply. I read every email personally.

Adam Lin · Founder & CEO · PanGuard AI, Inc. · adam@panguard.ai · +886 [redacted]

Termination for cause is governed by [MSA](#) Section 3.3 (material breach, 30-day cure) and the [Refund & Termination policy](#). Service credits are per the SOW; on exit you get a 30-day data-export window.

Email 2 — Onboarding check-in

From: adam@panguard.ai **Subject:** Onboarding check-in · {{customer_org}} Migrator Pro

Hi {{customer_first_name}},

Quick check on where we are and whether the tempo feels right. This is the point where deployment moves from planning to running against your environment.

What's done:

- Workspace provisioned

- Kickoff call held ({{kickoff_date}})
- Framework selected: {{framework}}
- {{checkbox_state}} Tech lead onboarded: {{tech_lead_name}}
- {{checkbox_state}} Environment access confirmed: {{environment_target}}

What's in flight:

- ATR engine deployment runbook drafted; deployment underway in {{environment_target}}.
- Legacy detection migration started — mapping your existing {{ruleset_filter}} detections into ATR.
- Rule pack candidates picked: {{rule_count}} rules from the {{ruleset_filter}} category. Final pack after deployment.

What I need from you this week:

- {{if_no_tech_lead}} Tech lead introduction (per SOW Section 7.1)
- {{if_no_environment}} Environment access (per SOW Section 7.2)

If anything has felt off — onboarding tempo, security disclosures, the Slack channel — reply and tell me directly. Early is the right time to correct course. Anything on the contract sits with legal@panguard.ai and me.

Adam

Email 3 — First quarterly evidence pack

From: adam@panguard.ai **Subject:** First quarterly evidence pack · {{customer_org}} · quarter-end check-in

Hi {{customer_first_name}},

First quarter of your Term. Your environment is live, the engine is running, and your first signed evidence pack is ready.

Delivered this quarter:

1. Engine deployed in {{environment_target}} — smoke test passed {{smoke_test_date}}.
2. Rule pack v1: {{rule_count}} rules, tagged for {{ruleset_filter}}. Migration report attached.
3. SIEM webhook for {{siem_target}} — test event verified {{webhook_test_date}}.

Attached: signed compliance evidence pack mapped to {{framework}}. This is continuously re-scanned and refreshed quarterly — the next refresh lands at the close of Q2. Open it, verify the SHA-256, and give feedback on:

- Are the {{framework}} control mappings sufficient for your auditor?
- Does the evidence narrative read the way your GRC team expects?
- Anything missing for your audit cycle?

Senior engineering support this quarter: {{hours_used}} of {{hours_budgeted}} hours logged (tracker visible in your workspace). {{narrative_on_hours}}

Next quarter:

- Continuous production monitoring against your environment
- Mid-quarter working session (45 min)
- Quarterly findings review + next signed evidence refresh

If you want to open a scope conversation — additional environments, more frameworks in the evidence set, or migrating more of your legacy detection library — this is a good time. Just reply “scope it” and I’ll book 45 min.

Adam

Email 4 — Quarterly review

From: adam@panguard.ai **Subject:** Quarterly review · {{customer_org}} · findings report + scope-expansion window

Hi {{customer_first_name}},

Quarterly review. Attached: the findings report from this quarter of production monitoring.

Highlights:

- {{events_total}} events processed
- {{threats_detected}} threats detected ({{critical_count}} critical, {{high_count}} high)
- {{actions_taken}} response actions executed (per your runbook)
- {{novel_findings}} novel attack patterns observed (rule submissions queued for upstream)

Senior engineering support used this quarter: {{hours_used_q}} of {{hours_budgeted_q}} hours. {{narrative_on_hours}}

Scope-expansion window

Everything in your Order Form is delivering. If your footprint is growing, expansions are set on an amended Order Form within your annual band and take effect the following quarter, so if you’re leaning toward more, now is when we should scope it.

Three common expansion paths from where you are now:

1. **Additional deployment environments** — extend the engine + rule pack + evidence coverage to more VPC / on-prem / airgap environments.
2. **Framework expansion** — add compliance frameworks to your quarterly evidence set (from: EU AI Act / NIST AI RMF / ISO 42001 / OWASP Agentic / OWASP LLM).
3. **Additional legacy source formats** — migrate more of your existing Sigma / YARA / Snort / Splunk SPL / Elastic EQL / Falco / Semgrep / CodeQL library into ATR (up to 15 supported source formats).

If you want any of these, reply “scope it” and I’ll send an amended Order Form draft within 5 business days; commercials are set by billing@panguard.ai and me within your annual band.

If your current scope is exactly right, nothing is required — delivery continues on the quarterly cadence and we’ll take stock at the annual review.

Adam

Email 5 — Annual review

From: adam@panguard.ai **Subject:** Annual review · {{customer_org}} Migrator Pro · renewal recommendation

Hi {{customer_first_name}},

We’re at the annual review. A full Term of production behind us. Attached: the annual review pack.

What’s inside:

1. Annual findings report (PDF) — full-Term production summary
2. Signed compliance evidence pack (PDF + JSON + manifest with SHA-256 + HMAC) — refreshed each quarter across the Term
3. Custom rule pack — finalised, {{final_rule_count}} rules, your-branch in the ATR repo
4. SIEM webhook config snapshot
5. Senior engineering support ledger — full-Term accounting
6. Renewal recommendation + amended Order Form draft (renew / expand / not renew, with migration instructions for each)

Decision moment

Per SOW Section 11, you have three options:

1. **Renew** — next-Term Order Form draft attached. Reply “renew” and I’ll confirm terms with billing@panguard.ai cc’d.

2. **Expand** — add environments / frameworks / source formats on an amended Order Form for the next Term.
3. **Not renew** — your workspace remains accessible for 30 days for data export, per the [MSA](#) and the [Refund & Termination policy](#). The review pack includes migration instructions for your team to operate ATR independently on the MIT licence.

Public acknowledgement (opt-in only)

If you're willing to be named publicly as a PanGuard customer — case study, logo on /atr/adopters, quote on /pricing — please reply with written consent. Otherwise we keep the engagement confidential.

Working session

Whichever path you pick, let's book the annual review working session. 45 minutes, your tech lead, your GRC lead optional. Reply with two slots in the next 5 business days.

Thank you for a full Term of trusting PanGuard with your detection stack. It's been a genuine pleasure building this with your team.

Adam

Notes for sender (internal)

- **All emails sign as Adam personally** — no “team@” or “noreply@” voice. Founder-first.
- **Email 1 goes on the Order Form effective date.** There is no separate invoice-issued email — billing follows the Order Form schedule (annual or quarterly, Net-30) and is handled by billing@panguard.ai. Some deliverables (first quarterly evidence pack in Email 3, annual review pack in Email 5) land on their scheduled milestones, not at send time.
- **Termination / refund correspondence** is handled separately under the [Refund & Termination policy](#) and MSA Section 3.3 (material breach, 30-day cure; service credits per SOW; 30-day data export on exit). Do not quote specific refund amounts or day-windows in these emails. Template at `06-Refund-Email-Template.md` (TBD).
- **Sentry / SIEM webhook templates** for the technical content: linked from inside each email, not pasted inline (keeps email small).
- **No marketing footer.** No “follow us on LinkedIn” links. This is enterprise correspondence.
- **Contract touchpoints** route to legal@panguard.ai; **billing touchpoints** route to billing@panguard.ai. Adam stays cc'd on both.
