Customer Onboarding — Migrator Pro

Template — v2.0 (internal draft). This onboarding runbook is an internal template to be reviewed and refined before it is issued to a Customer. `{{tokens}}` are placeholders resolved at issue time. Migrator Pro is a sales-led **annual** engagement (USD \$500,000–\$2,000,000 per year) with commercial terms set on an executed **Order Form** — there is no self-serve checkout. All terms are governed by the [MSA](#), the [Refund & Termination policy](#), and the [Migrator Pro SOW](#). This engagement replaces the retired \$25K Pilot.

Welcome, `{{customer_first_name}}`. This document is your roadmap for onboarding your annual **Migrator Pro** engagement. It pairs with Email 1 (Welcome) and the live workspace dashboard at https://app.panguard.ai/w/{{workspace_slug}}.

The annual Term runs from the start date on your Order Form. Onboarding — kickoff, environment access, engine deployment, first evidence pack — is established in the **first quarter**; delivery is then continuous over the Term (quarterly evidence refresh, annual review). Nothing below ties the engagement to a fixed exit date.

If anything here is unclear, message Adam in the Slack Connect channel or email adam@panguard.ai directly.

Day 0 (today)

What you receive today:

- This document (PDF on email + live at <https://panguard.ai/legal/onboarding>)
- Magic-link email to claim your workspace
- Slack Connect invitation (arrives within 24 hours)
- Your executed Order Form + the first invoice from billing@panguard.ai

What you do today:

1. Click the magic-link email to claim your workspace
2. Accept the Slack Connect invitation (when it arrives)
3. Read “Your 7 Migrator Pro deliverables” below so you know what you’re getting

Week 1 — Framework priority

Confirmed at kickoff. Migrator Pro delivers signed, continuously re-scanned compliance evidence across **five** regulatory frameworks (Deliverable 4), refreshed quarterly over the Term. During onboarding, tell us which `{{framework}}` to sequence **first** in your initial quarterly evidence pack — the remaining frameworks follow in the quarterly refresh cadence.

Framework	Best for	Regulatory status
EU AI Act 2024/1689	F500 with EU operations	Article 50 transparency obligations phasing in
NIST AI RMF 1.0	US-headquartered F500 + federal contractors	Voluntary; de-facto US reference
ISO/IEC 42001:2023	International multi-jurisdiction AI deployments	Voluntary; rising in EU + APAC
OWASP Agentic Top 10	Engineering-led threat-model orgs	Voluntary; rapidly becoming the standard
OWASP LLM Top 10	LLM-application-only deployments	Voluntary

Reply to Email 1 with your priority `{{framework}}`.

Week 1 — Kickoff call (45 minutes)

Attendees:

- Customer side: tech lead (required) + GRC / compliance lead (optional but recommended)
- PanGuard side: Adam (founder)

Agenda:

Min	Topic
0–5	Introductions + engagement expectations recap
5–15	Your target AI agent / RAG / chatbot deployment: architecture review
15–30	Threat model for your specific deployment + which rule categories matter most
30–40	SIEM topology + which webhook target makes sense
40–45	Open questions + action items

Pre-read for both sides:

- PanGuard reads your AI strategy doc (public or NDA-shared)
- You read <https://panguard.ai/legal/security> and <https://panguard.ai/evidence-pack>

Output: 1-page kickoff notes in the Slack Connect channel.

Weeks 1–2 — Environment access

Provide access early — it unblocks ATR engine deployment (Deliverable 1).

Provide **ONE** of:

- **VPC (AWS / GCP / Azure):** IAM role for PanGuard’s deployment helper account, OR a Terraform module Customer applies locally
- **On-prem:** SSH access OR VPN with kubectl access OR a shared deployment notes doc
- **Airgap:** physical media handoff OR encrypted offline rule-pack delivery (zip + GPG)

PanGuard does **NOT** require write access to your production traffic. Read-only or sandbox is fine.

If access is delayed, the deployment and first-evidence milestones shift by the delay period. The annual Term start and renewal date are fixed on the Order Form and are **not** affected by onboarding delays.

Weeks 1–2 — SIEM target selection

Lock this early so we can schedule the webhook integration (Deliverable 5).

Tell us which SIEM you want the webhook integration with:

SIEM	Status	Format
Splunk	Template available	HEC JSON
Elastic	Template available	Bulk JSON
Datadog	Template available	Log Intake
Microsoft Sentinel	Template available	Data Collector API
Sumo Logic	Template available	HTTP Source
Chronicle	Template available	Unified Data Model
Other	Possible by mutual agreement	Negotiated per engagement

Your 7 Migrator Pro deliverables (recap from the Migrator Pro SOW)

Deliverable 1 — ATR engine deployment (in Customer environment)

PanGuard deploys the `agent-threat-rules` engine (MIT licensed) into your environment. The engine is open — you can also run the community scanner yourself for free (`npx @panguard-ai/panguard-scan@latest`) or clone `agent-threat-rules` from GitHub. Migrator Pro adds: reference architecture diagram tailored to your env, deployment runbook tailored to your platform, and smoke-test verification.

Acceptance: smoke test passes (engine boots, accepts events, returns findings on test payload). **Target:** Week 2 of onboarding.

Deliverable 2 — Maintained custom ATR rule pack

A custom ATR rule pack selected and tuned for your specific deployment, with benchmark report.

Maintained over the Term — updated as new attack patterns and rules land.

Acceptance: tech lead acknowledges receipt of YAML pack + benchmark in writing. **Target:** initial pack Week 3 of onboarding; maintained continuously thereafter.

Deliverable 3 — Legacy detection migration

Migration of your existing detection content into ATR. Up to **15 source formats** supported: Sigma, YARA, Snort, Splunk SPL, Elastic EQL, Falco, Semgrep, CodeQL, CVE-NVD, GHSA, OSV, KEV, garak, PyRIT, promptfoo.

Acceptance: converted rules delivered + validated against your samples. **Target:** initial batch within the first quarter; continuous thereafter over the Term.

Deliverable 4 — Signed, continuously re-scanned compliance evidence

Full compliance evidence pack mapped to your frameworks (EU AI Act / NIST AI RMF / ISO 42001 / OWASP Agentic / OWASP LLM), with SHA-256 + signature integrity proofs, brand-customised to your org. Continuously re-scanned and **refreshed QUARTERLY**.

Acceptance: first pack delivered + you reproduce SHA-256 locally. **Target:** first pack within the first quarter; re-signed and refreshed each quarter over the Term.

Deliverable 5 — SIEM webhook integration

Configuration + working end-to-end test into your chosen SIEM.

Acceptance: test event visible in your SIEM within 60s of generation. **Target:** Week 4 of onboarding.

Deliverable 6 — Senior engineering support over the Term

Direct senior engineering support across the annual Term, tracked live in your workspace dashboard, per the allocation set in the SOW / Order Form. Pre-scheduled blocks preferred.

Acceptance: support cadence tracked in the dashboard; allocation delivered per the SOW.

Deliverable 7 — Annual review & renewal recommendation

Toward the end of the annual Term: a findings summary across the year, framework-coverage review, and a written renewal recommendation (renew / adjust scope / additional environments).

Acceptance: review document delivered + working session held.

What's out of scope

Per the Migrator Pro SOW, anything outside the scope defined on your Order Form is out of scope. Common examples negotiated as a written change order or a separate engagement:

- Deployment to environments beyond those scoped on the Order Form
- Multi-tenant rollout beyond scoped tenants
- 24/7 follow-the-sun on-call (unless separately contracted)
- Compliance mappings beyond the five named frameworks
- SAML / SCIM beyond standard SSO
- **Sovereign / air-gapped fully-managed deployment** — a separate engagement (Sovereign tier)

Add-ons are scoped by mutual written agreement and reflected in an amended Order Form.

Termination, service credits & data export

Migrator Pro is an **annual B2B** engagement. There is no self-serve checkout and no consumer-style refund window.

- **Termination:** governed by **MSA Section 3.3** — either party may terminate for uncured **material breach** after a **30-day cure period**. Full terms in the [MSA](#) and the [Refund & Termination policy](#).
- **Service credits:** where a delivery commitment in the SOW is missed, **service credits** apply as defined in the [Migrator Pro SOW](#).
- **Data export on exit:** on termination or non-renewal you receive a **30-day** window to export your data and evidence artifacts.

No specific refund dollar amounts or fixed day-windows beyond the above are implied; see the [Refund & Termination policy](#) for the governing terms.

Communication channels

Channel	Purpose	Response SLA
Slack Connect	Day-to-day questions, status updates, screenshots	Best-effort, typically <4 hours during Taipei business hours
Email — adam@panguard.ai	Formal communications, contract questions, scoping discussions	1 business day
security@panguard.ai	Security incidents only	4 hours (24/7)
billing@panguard.ai	Invoice / payment / Order Form questions	1 business day
legal@panguard.ai	MSA / SOW / legal questions	1 business day
Phone / Signal	Escalations (provided in Slack Connect)	Best-effort

PanGuard operates in **Taipei time (GMT+8)**. Adam's standard hours: 09:00–20:00 weekdays, best-effort weekends.

Onboarding & Term milestones

Milestone	What happens
Kickoff (Week 1)	Confirm framework priority + environment access path
End of first quarter	Initial deployment established: engine live, custom rule pack delivered, SIEM webhook integrated, first quarterly evidence pack delivered
Each quarter	Compliance evidence re-scanned, re-signed, and refreshed; rule pack + legacy migration updated
~60 days before Term end	Annual review + written renewal recommendation delivered (Deliverable 7)
Term end	Renewal decision: renew / adjust scope / non-renewal (with 30-day data export on exit)

Honest disclosure of risks

PanGuard is an early-stage company. Honest disclosure of structural risks:

1. **Bus factor = 1.** Adam is the sole engineer + founder today; a CTO co-founder search is in flight. If Adam is unable to deliver for an extended period due to incapacity, you can either accept a delivery extension OR escalate per **MSA Section 12.2**; termination for uncured material breach is governed by **MSA Section 3.3** (30-day cure).
2. **No SOC 2 attestation yet.** Type 1 is on the roadmap: <https://panguard.ai/samples/soc2-roadmap/PanGuard-SOC2-Roadmap-2026.pdf>. If SOC 2 evidence is required before a specific date, tell us during onboarding so we can address it in the Order Form.
3. **No cyber insurance bound yet.** Coverage is being arranged. If insurance evidence is required as a condition of your engagement, please tell us during onboarding — we may need to adjust the timeline, or reflect the gap in the Order Form.
4. **Early-stage company.** Operating from founder capital; disclosed so you understand the counterparty. This is not a Series-A operation.

We disclose these because annual Migrator Pro customers deserve the truth.
